Agenda & Executive Roadmap

5 Strategic Modules

01

Endpoint Security

Securing primary entry vectors and remote devices.

VECTOR ANALYSIS

02

Threat Actors & Markets

Understanding adversary economics and dark markets.

THREAT LANDSCAPE

03

How Antivirus Works

Mechanics of signature, heuristic, and behavioral defenses.

DEFENSE ENGINES

04

Ransomware: The Problem

Anatomy of modern extortion attacks and business impact.

CRITICAL RISK

05

Ransomware: The Solution

Resilience, immutable backups, and recovery strategies.

MITIGATION

Why is this important?

© COPYRIGHT 2025 – DONNACHA FORDE. ALL RIGHTS RESERVED.

CYBERCRIME AFFECTS EVERYBODY

- We need to stop adversaries:
  - Stealing our plans to prevent or hinder development and progress
  - Stealing our money to fund war machines
  - Stealing our IP and weakening our economies
- Ransomware targeting critical services
  - E.g. Healthcare → Life/Death situations

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

GLOBAL ECONOMIC THREAT

The Escalating Cost of Global Cybercrime

2025 Estimate

$10.5 Trillion

Estimated annual global damage

Almost doubled since 2021 ($11T)

ECONOMIC SCALE

3rd Largest

Largest global economy

Trails only USA and China in economic scale

HISTORICAL PERSPECTIVE

Greatest Wealth Transfer

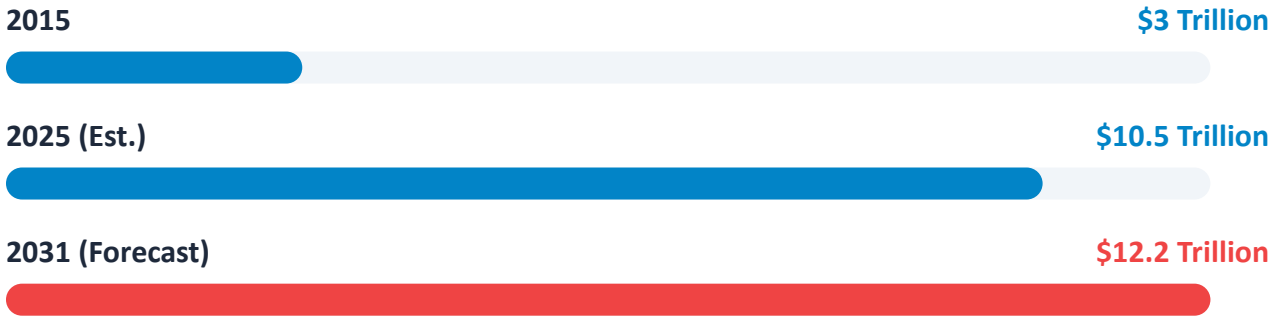

More profitable than global illegal drug trade; exceeds all natural disaster damages combined.

Unprecedented threat to global markets

Source: Cybersecurity Ventures – 2025 Cybersecurity Almanac (Dec 2025) and press release (May 2025). All figures are forecasts, not measured totals.

TRAJECTORY ANALYSIS

Cybercrime Costs Up 3.5x in a Decade

Key Takeaway: Damages are estimated to have risen from $3T (2015) to $10.5T (2025); growth is now forecast to slow to about 2.5% a year.

Source: Cybersecurity Ventures (Almanac, Dec 2025; press release, May 2025). Forecasts.

The Escalating Financial Impact of Data Breaches

Sources: IBM Cost of a Data Breach (2024–2026); Verizon 2026 DBIR

AVERAGE COST ACROSS ALL SECTORS

$4.99M +12% YoY

FINANCIAL SECTOR AVERAGE COST

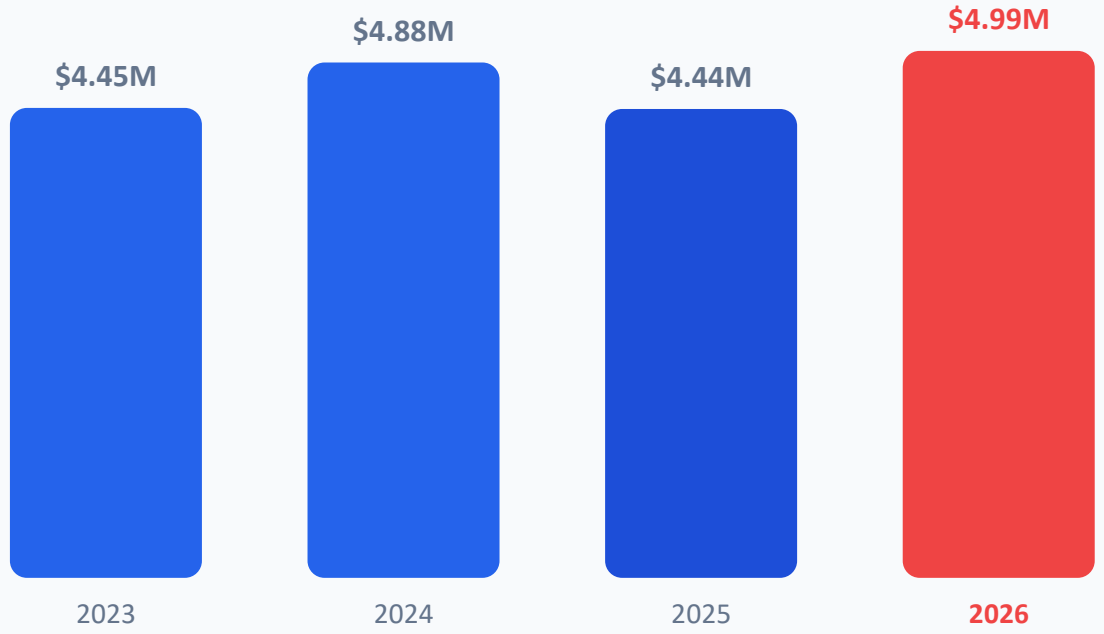

$6.3M IBM 2026

TOP INITIAL ACCESS VECTOR

Vulnerability Exploitation Leads at 31%

Ahead of credential abuse (13%); only 26% of CISA KEV vulnerabilities were fully remediated (Verizon 2026 DBIR).

GLOBAL AVERAGE COST OF A DATA BREACH (USD MILLIONS)

© Copyright 2026 – Donnacha Forde. All rights reserved.

Annual Global Malware Attack Volume (2015–2023)

Statista 2024

2023 TOTAL ATTACK VOLUME

6.06B +10% YoY

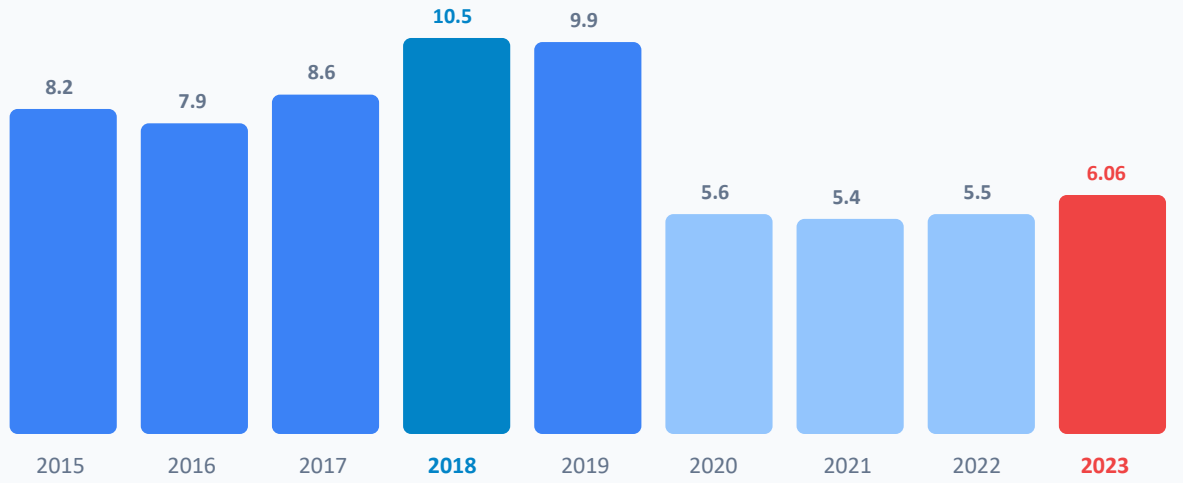

HISTORICAL HIGH WATER MARK (2018)

10.5B Attacks

TOP THREAT DELIVERY VECTOR

Websites Are the Most Common Vector

Drive-by downloads and web application exploits remain the primary delivery mechanism for malware payloads.

© Copyright 2026 – Donnacha Forde. All rights reserved.

Endpoint Security

© Copyright 2026 – Donnacha Forde. All rights reserved.

WHAT IS THE ‘ENDPOINT’?

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

The Endpoint: An ever-growing Attack Surface

Typical EPP / EDR scope

Desktop PC

Laptop

Tablet

Mobile

Server

Gaming Device

IoT Device

Smart Home Devices

VMs & Containers

Network

Outside the usual scope

Where cloud meets device

WHAT IS ENDPOINT SECURITY?

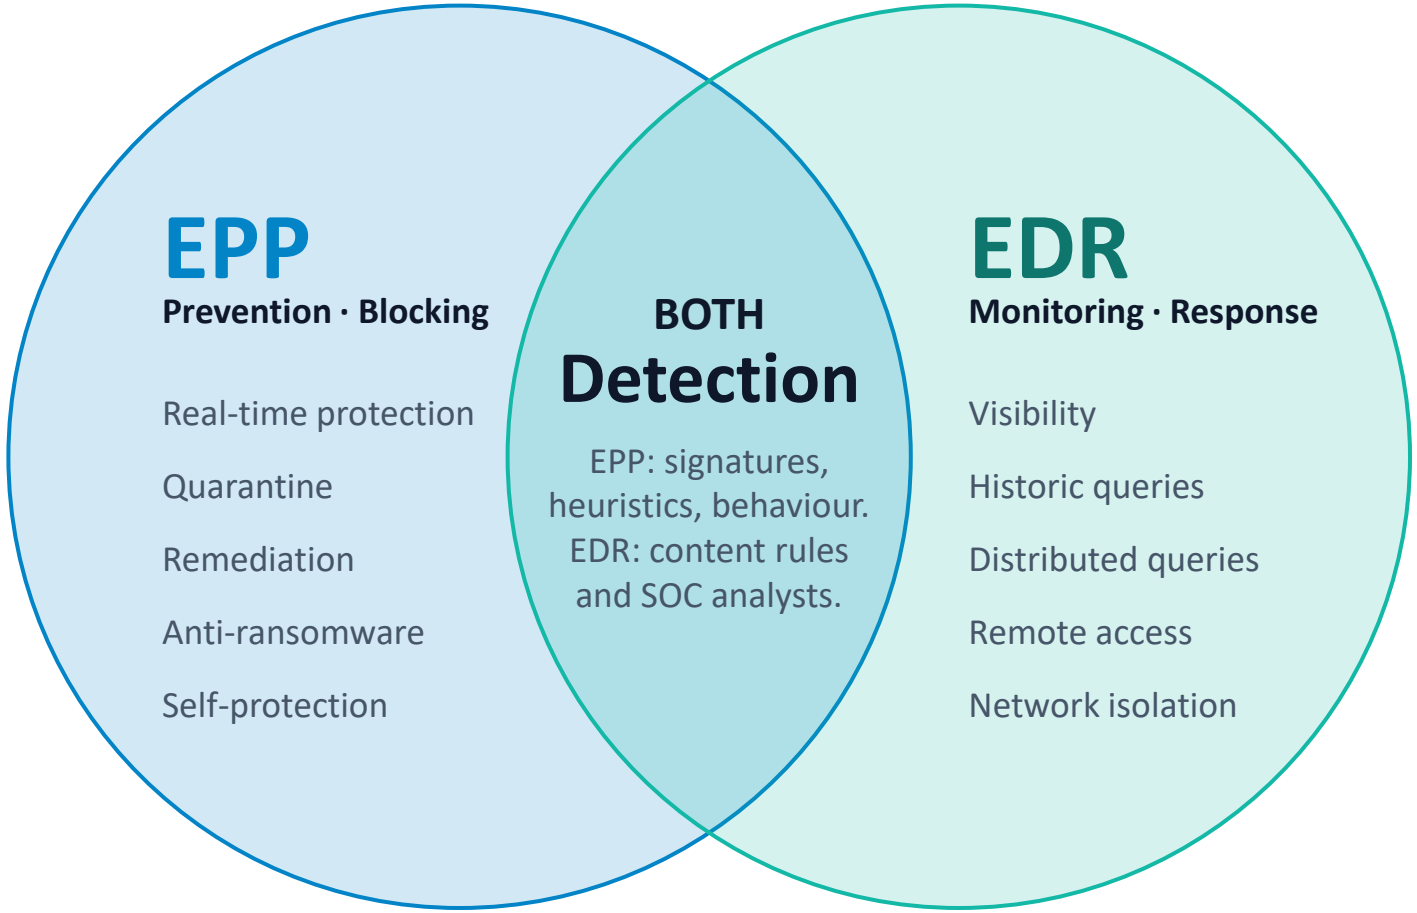

© COPYRIGHT 2026 – DONNACHA FORDE.
ALL RIGHTS RESERVED.

ENDPOINT SECURITY

Antivirus (AV) / Antimalware	Data Loss Prevention (DLP) / Data Protection	Ad Blocking
Patch & Vulnerability Management	Password Management	Email protection*
Identity Protection* (IAM)	Endpoint Detection & Response (EDR)	Web Protection
Browser Isolation	Firewall	Network Control/Protection
Intrusion Detection and Prevention (IDP)	VPN	DNS Filtering

EPP vs EDR: Different Jobs, Shared Detection

NATURAL TENSION

Protection vs Detection

Both need detection. EPP wants to stop harm before it happens; EDR wants the visibility to find what slips through.

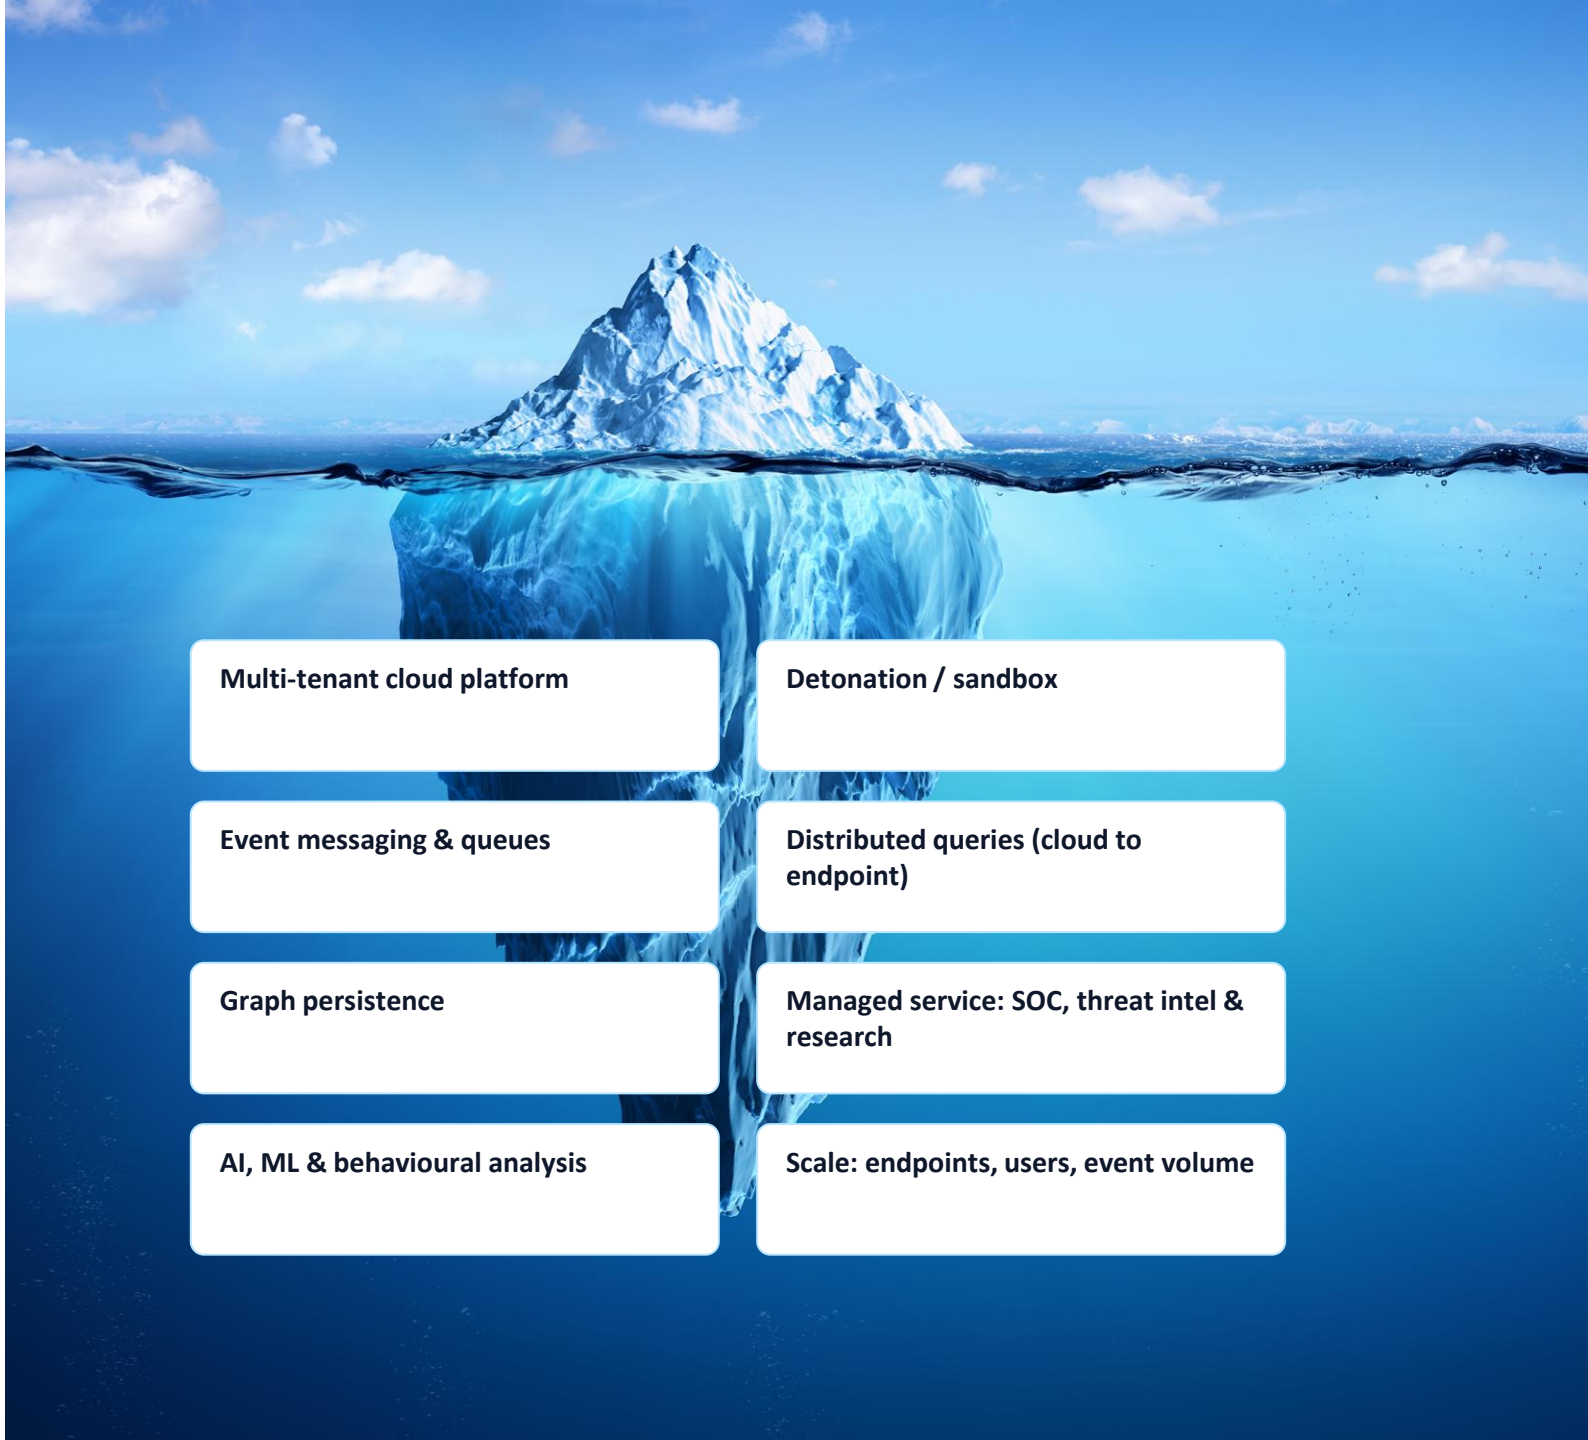

WHY THE CIRCLES OVERLAP

Some EDR detections are high-confidence enough to convict and block, so the line between the two is blurry.

ATT&CKcon 6.0 returns October 14-15, 2025 in McLean, VA. More details about tickets and our CFP can be found here

ATT&CK®

Get Started | Take a Tour

Contribute | Blog

FAQ | Random Page

MITRE ATT&CK® is a globally-accessible knowledge base of adversary tactics and techniques based on real-world observations. The ATT&CK knowledge base is used as a foundation for the development of specific threat models and methodologies in the private sector, in government, and in the cybersecurity product and service community.

With the creation of ATT&CK, MITRE is fulfilling its mission to solve problems for a safer world — by bringing communities together to develop more effective cybersecurity. ATT&CK is open and available to any person or organization for use at no charge.

ATT&CK Matrix for Enterprise

layout: side | show sub-techniques | hide sub-techniques

Reconnaissance	Resource Development	Initial Access	Execution	Persistence	Privilege Escalation	Defense Evasion	Credential Access	Discovery	Lateral Movement	Collection	Command and Control	Exfiltration	Impact
10 techniques	8 techniques	10 techniques	14 techniques	20 techniques	14 techniques	44 techniques	17 techniques	32 techniques	9 techniques	17 techniques	18 techniques	9 techniques	14 techniques
Active Scanning (3)	Acquire Access	Content Injection	Cloud Administration Command	Account Manipulation (7)	Abuse Elevation Control Mechanism (6)	Abuse Elevation Control Mechanism (6)	Adversary-in-the-Middle (4)	Account Discovery (4)	Exploitation of Remote Services	Adversary-in-the-Middle (4)	Application Layer Protocol (5)	Automated Exfiltration (1)	Account Access Removal
Gather Victim Host Information (4)	Acquire Infrastructure (8)	Drive-by Compromise	Command and Scripting Interpreter (11)	BITS Jobs	Access Token Manipulation (5)	Access Token Manipulation (5)	Brute Force (4)	Application Window Discovery	Internal Spearphishing	Archive Collected Data (3)	Communication Through Removable Media	Data Transfer Size Limits	Data Destruction (1)

Phishing for Information (4)	Establish Accounts (3)	Phishing (4)	Inter-Process Communication (3)	Compromise Host Software Binary	Create or Modify System Process (5)	Deobfuscate/Decode Files or Information	Forge Web Credentials (2)	Cloud Service Discovery	Replication Through Removable Media	Clipboard Data	Dynamic Resolution (3)	Exfiltration Over Physical Medium (1)	Disk Wipe (2)
Search Closed Sources (2)	Obtain Capabilities (7)	Replication Through Removable Media	Native API	Create Account (3)	Domain or Tenant Policy Modification (2)	Deploy Container	Input Capture (4)	Cloud Storage Object Discovery	Software Deployment Tools	Data from Cloud Storage	Encrypted Channel (2)	Exfiltration Over Web Service (4)	Endpoint Denial of Service (4)
Search Open Technical Databases (5)	Stage Capabilities (6)	Supply Chain Compromise (3)	Scheduled Task/Job (5)	Create or Modify System Process (5)	Escape to Host	Direct Volume Access	Modify Authentication Process (9)	Container and Resource Discovery	Taint Shared Content	Data from Configuration Repository (2)	Fallback Channels	Scheduled Transfer	Financial Theft
Search Open Websites/Domains (3)		Trusted Relationship	Serverless Execution	Event Triggered Execution (17)	Event Triggered Execution (17)	Domain or Tenant Policy Modification (2)	Multi-Factor Authentication Interception	Debugger Evasion	Use Alternate Authentication Material (4)	Data from Information Repositories (5)	Hide Infrastructure	Transfer Data to Cloud Account	Firmware Corruption
Search Victim-Owned Websites		Valid Accounts (4)	Shared Modules	External Remote Services	Exploitation for Privilege Escalation	Execution Guardrails (2)	Multi-Factor Authentication Request Generation	Device Driver Discovery		Data from Local System	Ingress Tool Transfer		Inhibit System Recovery
			Software Deployment Tools	Hijack Execution Flow (13)	Hijack Execution Flow (13)	Exploitation for Defense Evasion	Network Sniffing	Domain Trust Discovery		Data from Network Shared Drive	Multi-Stage Channels		Network Denial of Service (2)
			System Services (2)	Implant Internal Image	Process Injection (12)	File and Directory Permissions Modification (2)	OS Credential Dumping (8)	File and Directory Discovery		Data from Removable Media	Non-Application Layer Protocol		Resource Hijacking (4)
			User Execution (3)	Modify Authentication Process (9)	Scheduled Task/Job (5)	Hide Artifacts (12)	Steal Application Access Token	Group Policy Discovery		Data Staged (2)	Non-Standard Port		Service Stop
			Windows Management Instrumentation	Office Application Startup (6)	Valid Accounts (4)	Hijack Execution Flow (13)	Steal or Forge Authentication Certificates	Log Enumeration		Email Collection (3)	Protocol Tunneling		System Shutdown/Reboot
				Power Settings		Impair Defenses (11)	Steal or Forge Kerberos Tickets (5)	Network Service Discovery		Input Capture (4)	Proxy (4)		
				Pre-OS Boot (5)		Impersonation	Steal Web Session Cookie	Network Share Discovery		Screen Capture	Remote Access Software		
				Scheduled Task/Job (5)		Indicator Removal (10)	Unsecured Credentials (8)	Network Sniffing		Video Capture	Traffic Signaling (2)		
				Server Software Component (5)		Indirect Command Execution		Password Policy Discovery			Web Service (3)		
				Traffic Signaling (2)		Masquerading (10)		Peripheral Device Discovery					
				Valid Accounts (4)		Modify Authentication Process (9)		Permission Groups Discovery (3)					
						Modify Cloud Compute Infrastructure (5)		Process Discovery					
						Modify Cloud Resource Hierarchy		Query Registry					
						Modify Registry		Remote System Discovery					
						Modify System Image (2)		Software Discovery (1)					
						Network Boundary Bridging		System Information Discovery					
								System Location Discovery (1)					
								System Network Configuration Discovery (2)					

Market Segments

Enterprise

Primary Target for Adversaries

Environment

- Exist behind Firewall
- Network traffic goes through a gateway

Managed Endpoint

- More sterile environment, Less deviation

SME

Enterprise v SOHO

Consumer

More diverse environment

Not sterile

Greater exposure

© Copyright 2026 – Donnacha Forde. All rights reserved.

RISK EXPOSURE

Primary Drivers of Enterprise Vulnerability

Unpatched System Exploits

Legacy software and delayed security patches create immediate threat entry points.

Social Engineering

Phishing and credential theft remain the top vector for initial perimeter breaches.

Ransomware Expansion

Double-extortion tactics threaten operational downtime alongside data exposure.

© Copyright 2026 – Donnacha Forde. All rights reserved.

MITIGATION FRAMEWORK

Core Pillars of Enterprise Cyber Resiliency

Pillar 01

Zero Trust Architecture

Verify explicitly, enforce least privilege access across all workloads.

Pillar 02

Continuous Monitoring

Deploy automated telemetry and AI-driven anomaly detection systems.

Pillar 03

Incident Readiness

Test response playbooks and maintain immutable backup copies.

© Copyright 2026 – Donnacha Forde. All rights reserved.

WHY IS ENDPOINT SECURITY STILL SO CRITICAL?

Ever increasing number of connected devices

Industry trends

Bring your own device (BYOD)

Shadow IT

Remote Working (WFH)

Shift to Cloud Computing

Prevalence of Real-world threats

Ransomware

Data breaches

Insider-threats

Cost of Security Incidents

Direct extorsion - ransom

Financial loss – impact on business function

Reputational damage

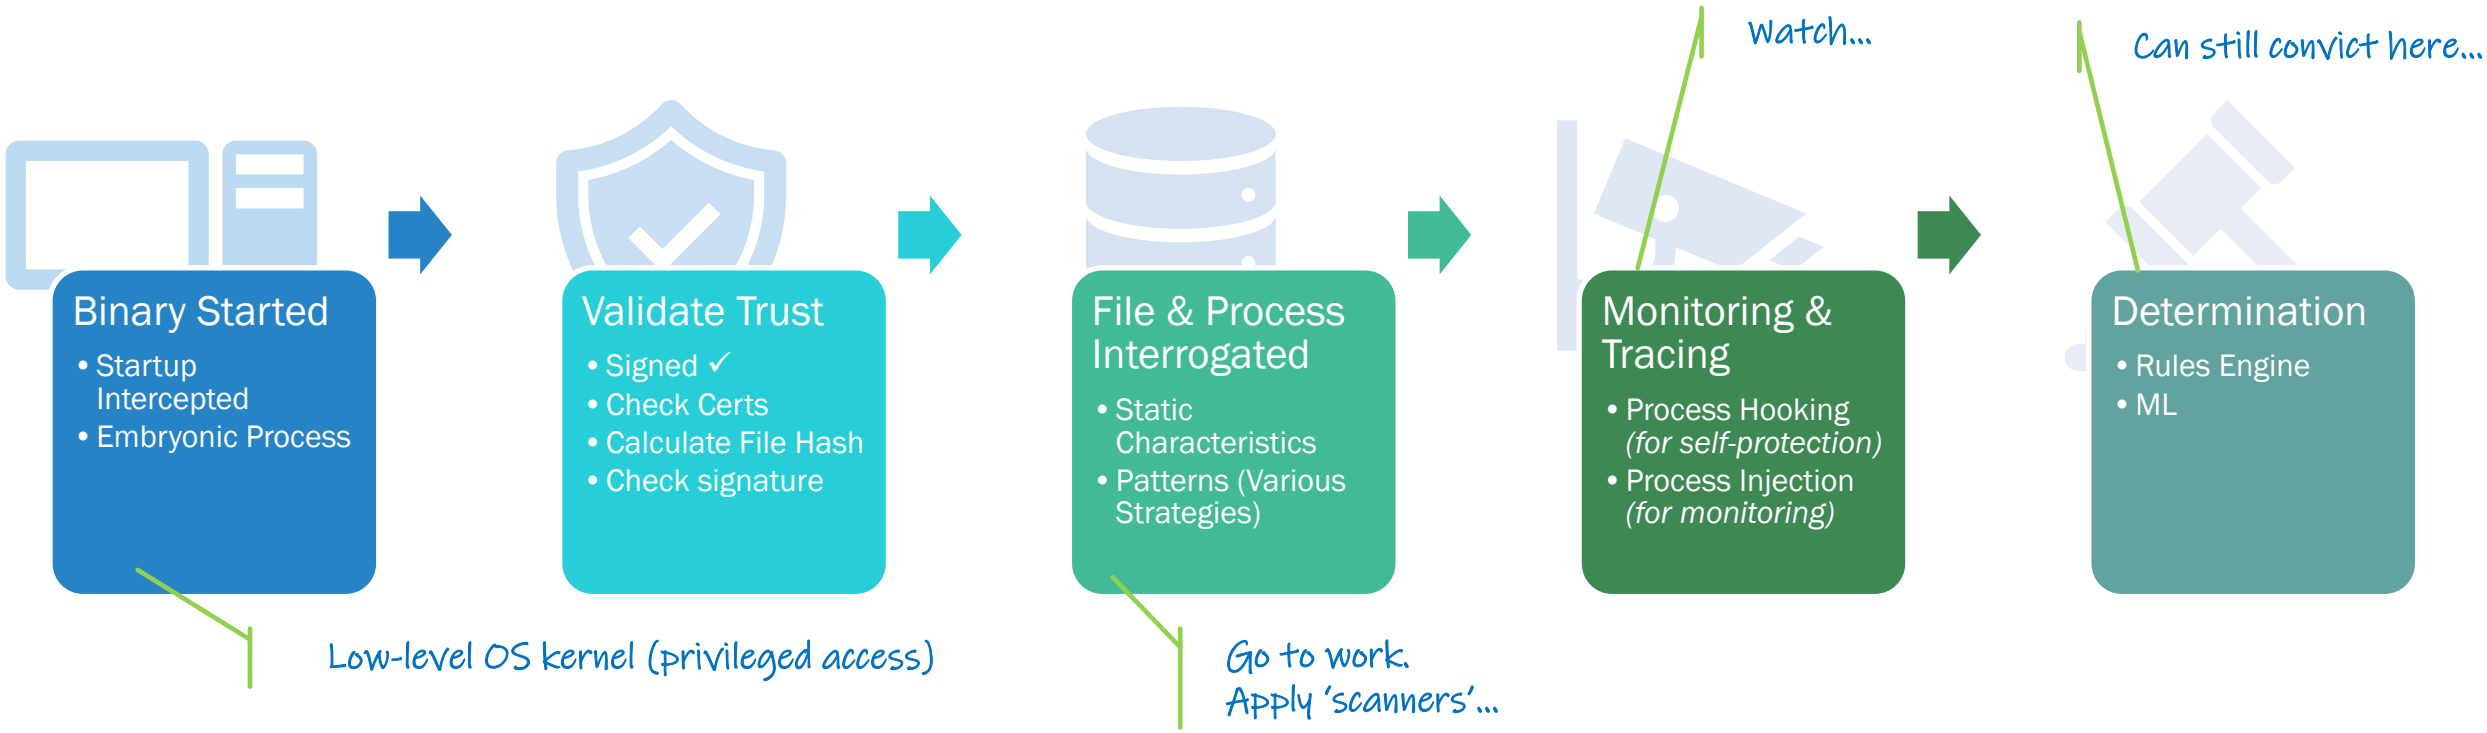

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

Antivirus, Antimalware & EDR

How AV & Ransomware works

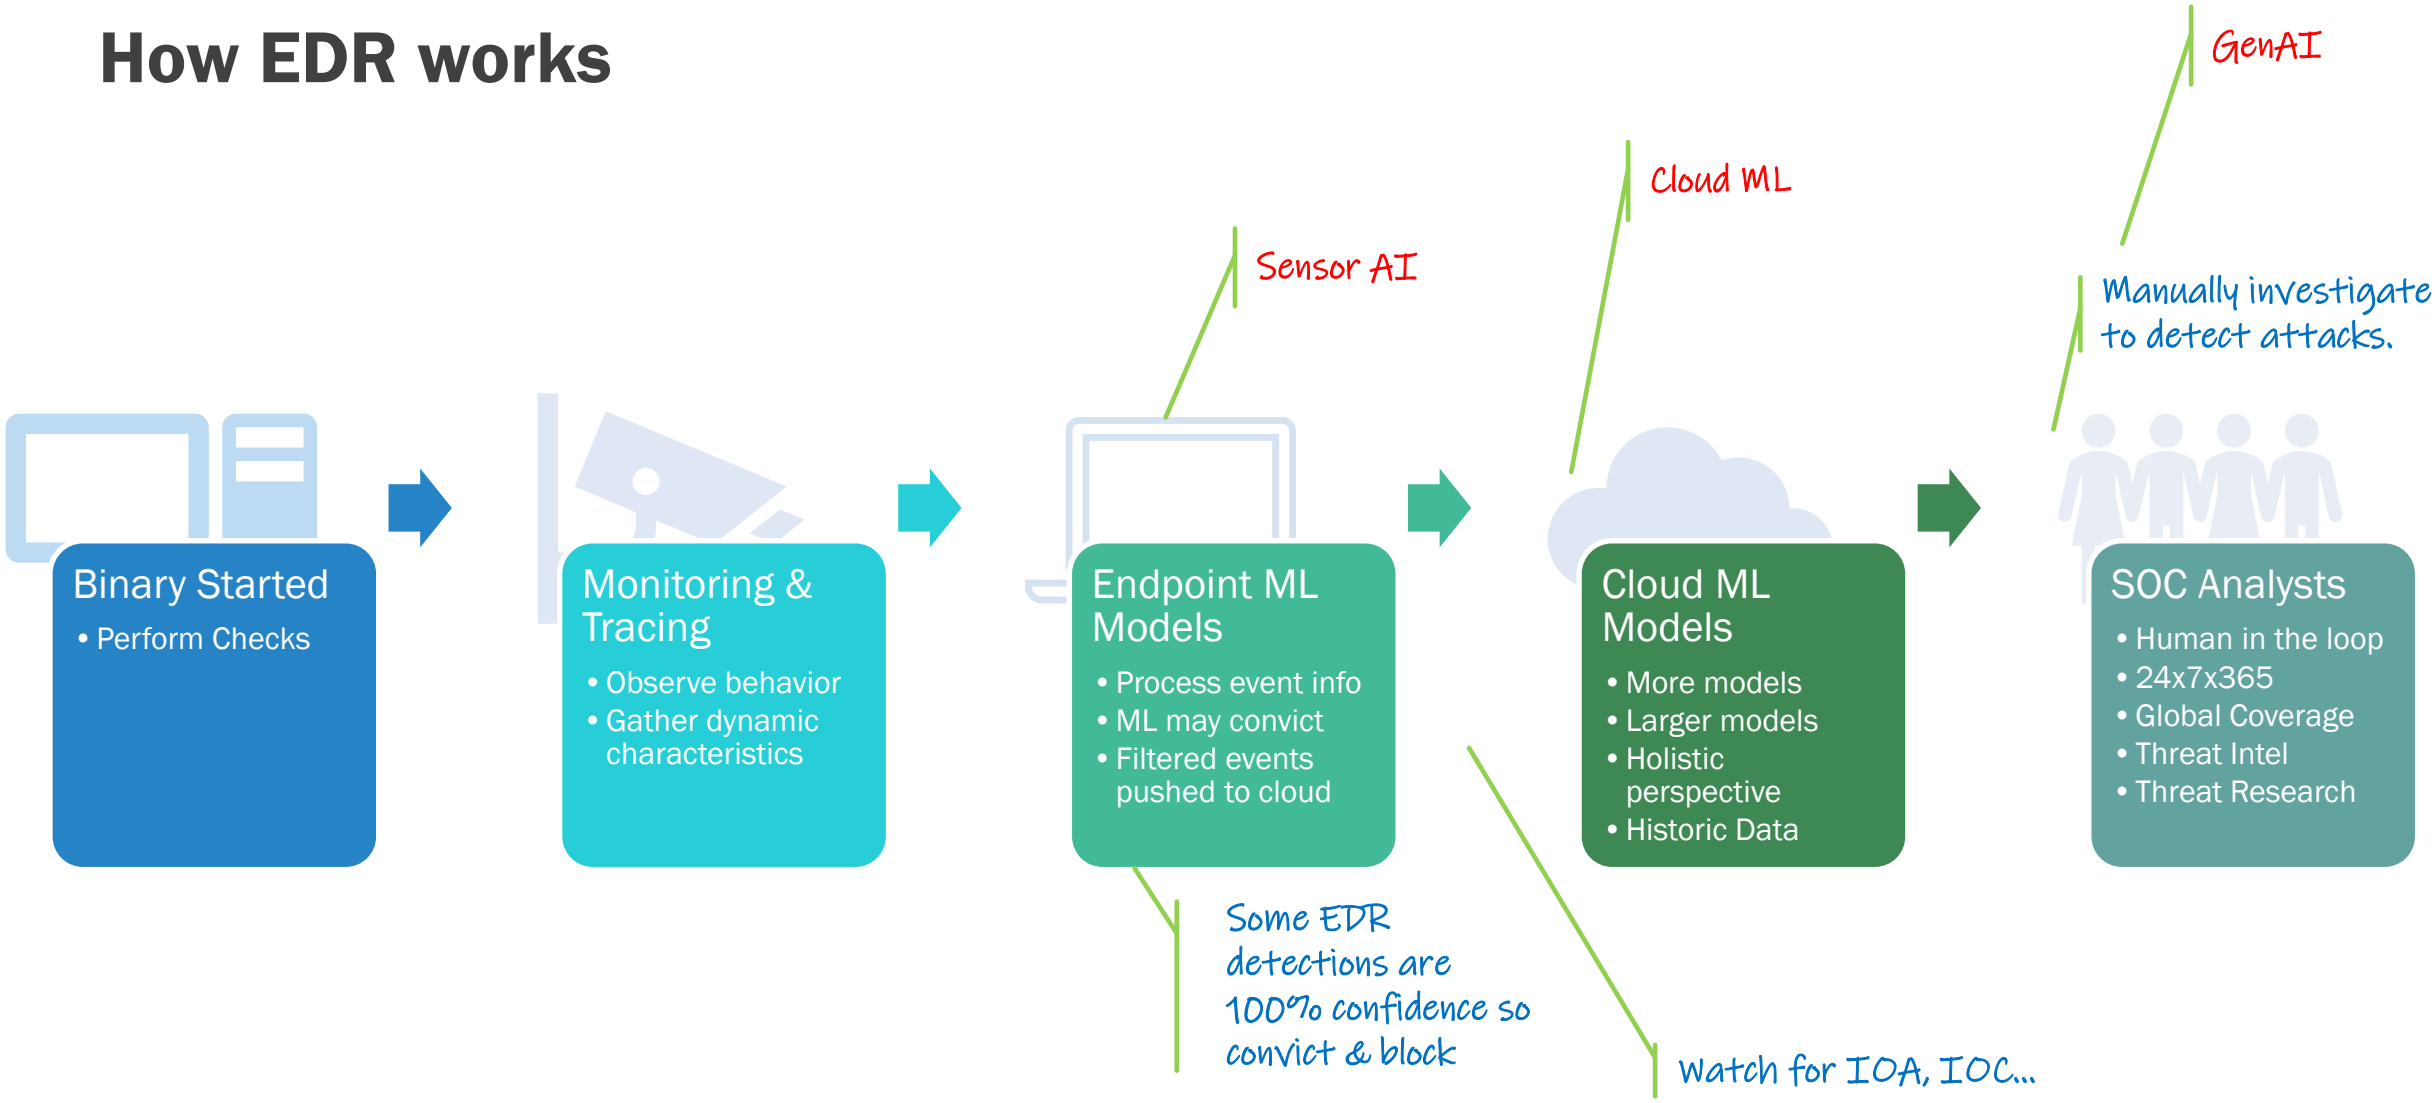

© Copyright 2026 – Donnacha Forde. All rights reserved.

How Traditional AV works

© Copyright 2026 – Donnacha Forde. All rights reserved.

How EDR works

© Copyright 2026 – Donnacha Forde. All rights reserved.

Endpoint Security Challenges

- Evolving Threats
  - Zero-day Attacks
  - Advanced Persistent Threats (APT)
  - AI Identified Vulnerabilities
  - AI Generated Threats
  - Social Engineering
- Complexity – Managing at Scale
  - Security & IT Management
- Reaction Time vs Volume of Data
  - SOC Analyst Response
  - Threat Hunting
  - Threat Intel
  - AI Assisted Analysis

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

Endpoint Engineering Challenges

- Scale & Complexity
  - Volume of System Event Info
  - Complex corporate environments
- Costs → COGS
  - CPU, Network, Storage
- Balance
  - Security vs User Convenience vs Performance
- Rate of Delivery
  - Provide new features & solutions in a complex environment
  - Respond Quickly

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

The Problem – Ransomware

A look at Ransomware Trends

© Copyright 2026 – Donnacha Forde. All rights reserved.

Ransomware continues to be a Threat

- Attacks are still rising: +25% year over year
- But fewer victims pay: payments fell 35% in 2024

ATTACK VOLUME

+25%

known ransomware attacks vs. the prior 12 months (ThreatDown, Jul 2024 - Jun 2025)

TOP TARGET

47%

of known attacks hit the United States (ThreatDown)

IN BREACH DATA

48%

of breaches involved ransomware, up from 44% (Verizon 2026 DBIR)

PAYMENTS, 2024

-35%

to $813.55M, from a record $1.25B in 2023 (Chainalysis)

Sources: *ThreatDown 2025 State of Ransomware; Verizon 2026 DBIR; Chainalysis (Feb 2025)*

The Catalyst: Cryptographic Monetization & Bitcoin

Evolution of Ransomware Extortion Friction (2005 – Present)

2005

Pre-Crypto Era (Aids Info / GPCcode)
High friction payment methods (wire, SMS, gift cards). High law enforcement traceability.

2009

Bitcoin Genesis & Network Launch Catalyst
Introduced trustless, pseudo-anonymous, cross-border payment settlement at scale.

2013+

CryptoLocker & RaaS Explosion
First widespread automated crypto-ransomware. Ransomware scales into a $20B+ industry.

Key Thesis: Bitcoin removed the primary operational barrier for cybercriminals—safe, automated extortion collection.

1. Unbreakable Ransom Mechanics

Asymmetric RSA/AES encryption locks local files while Bitcoin guarantees non-reversible settlement without bank interception.

2. Ransomware-as-a-Service (RaaS)

Monetization friction removal enabled affiliate models: core developers build malware; affiliates execute breach campaigns.

3. Double Extortion Tactics

Modern actors combine file encryption with data exfiltration threats, demanding separate payments to prevent public leaks.

© Copyright 2026 – Donnacha Forde. All rights reserved.

Innovation

Devising an Anti-ransomware Solution

© Copyright 2026 – Donnacha Forde. All rights reserved.

Strategies

Prevention

Block Malware

Zero-day Ransomware?

Polymorphic Malware?

Avoidance

Cloud Storage

(e.g. Microsoft OneDrive)

Minimize impact → Restore to last known-good backup

Incur re-image cost & effort

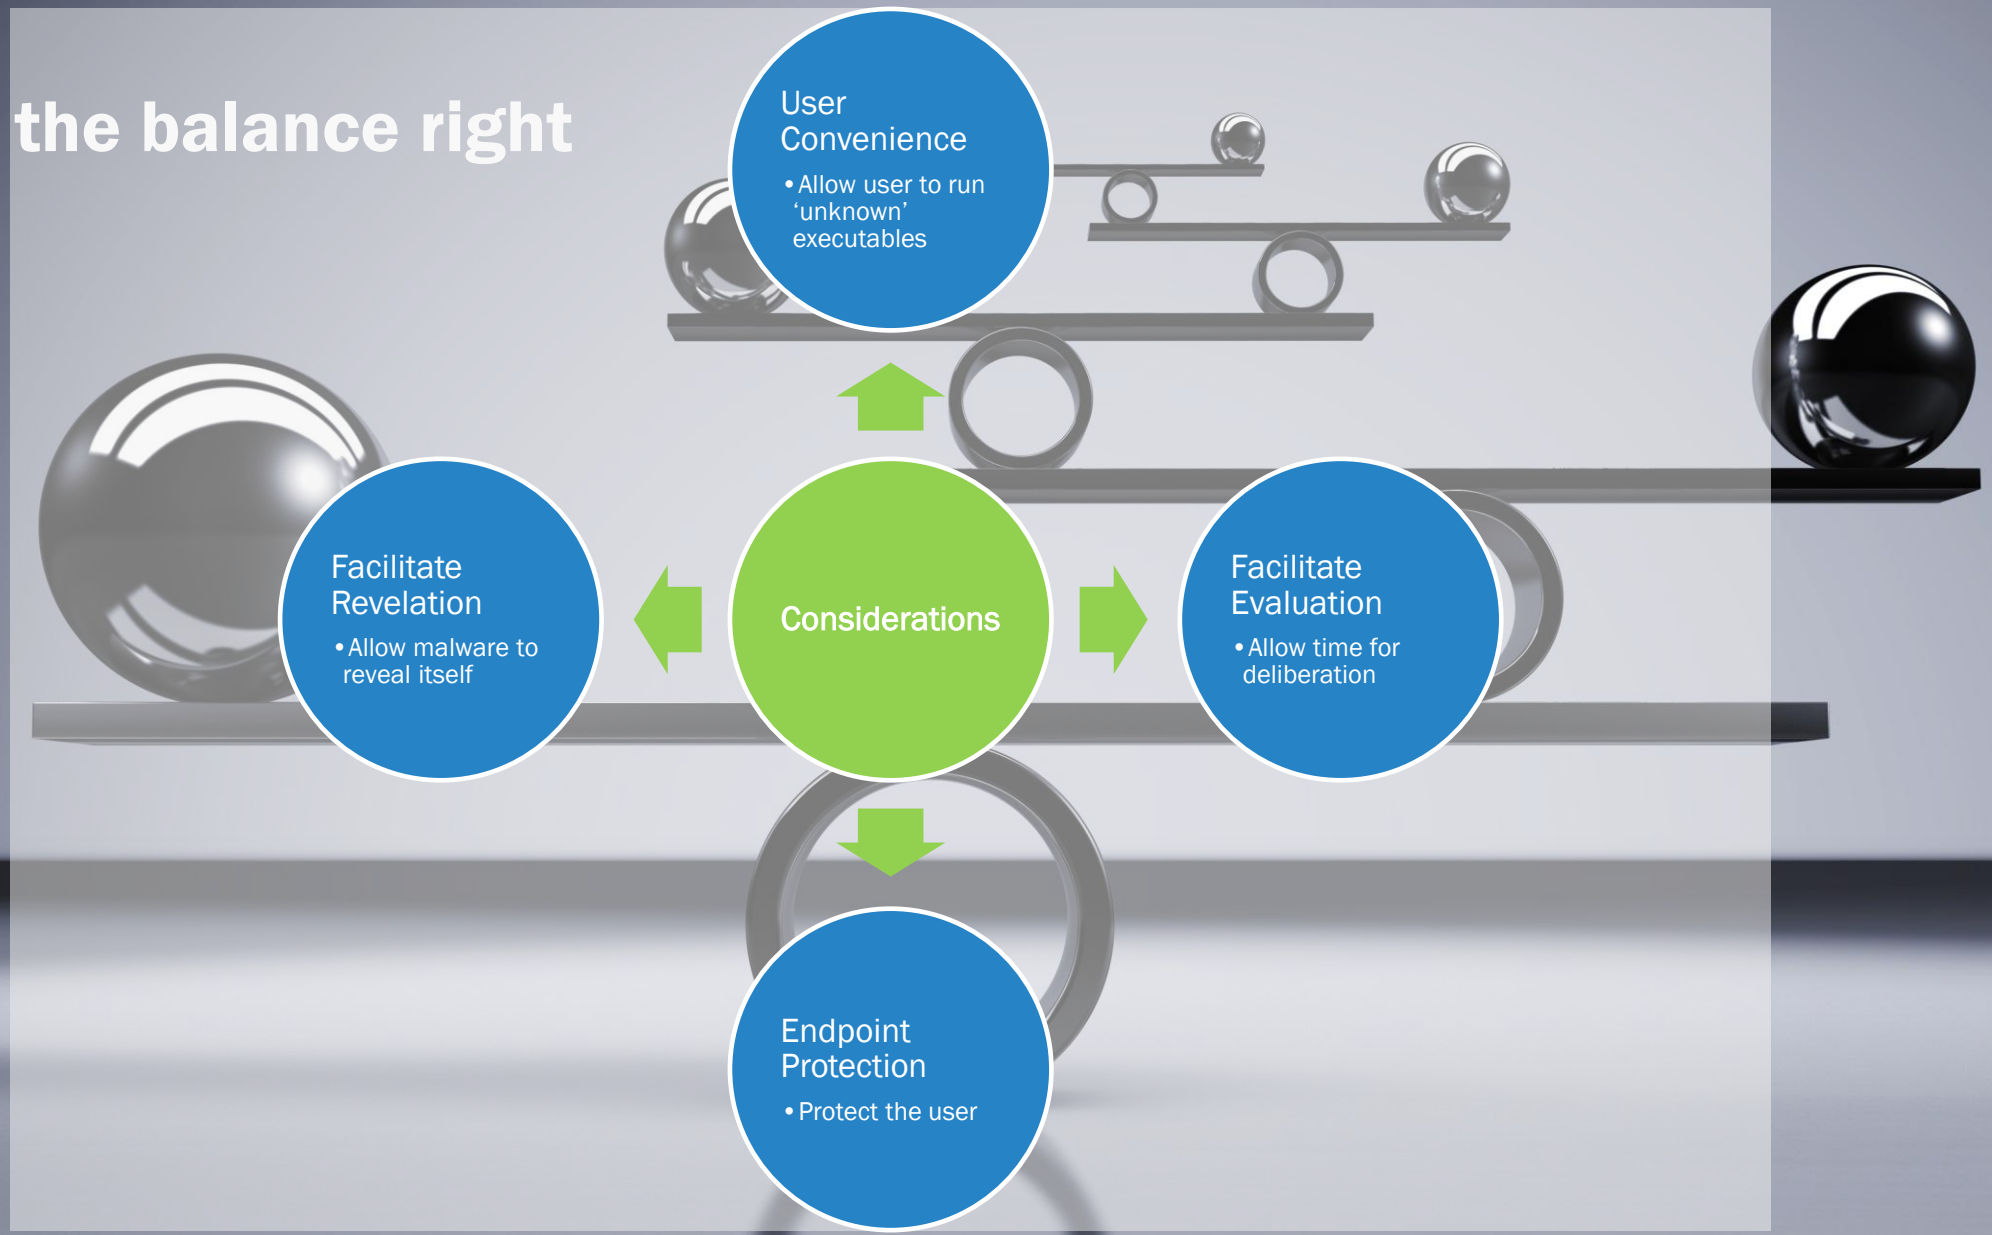

Remediate

Restore Endpoint to previous known-good state

© Copyright 2026 – Donnacha Forde. All rights reserved.

Getting the balance right

© Copyright 2026 – Donnacha Forde. All rights reserved.

REMEDIATION STRATEGIES

Confinement

Limit damage to a Virtual Image

Ditch VM on conviction

Roll forward if not convicted

Rollback Reversal

Perfect Undo

Rollback on conviction

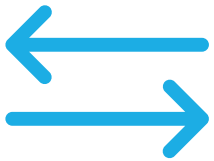

Do nothing if not convicted

© Copyright 2026 – Donnacha Forde. All rights reserved.

Remediation Strategies

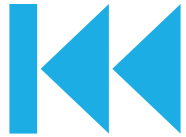

Optimistic v Pessimistic View

Roll forwards – or – Roll backwards

Most software != malware

Fewer instances where we need to take action → Roll backwards

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

Rollback Remediation

What is it? How does it work?

© Copyright 2026 – Donnacha Forde. All rights reserved.

Rollback Remediation

Before Conviction

Monitor

Create Backups

Post Conviction

Kill Process Tree

Restore

© Copyright 2026 – Donnacha Forde. All rights reserved.

Rollback Remediation

Correction Technology

Does not detect

Does not protect

Passively Monitors

Performs Low-level Monitoring

Maintains ‘Process Genealogy’ Tree

Active Monitoring Triggered

Records detailed activity

Maintains copies of File, Directory and Registry changes.

Monitors child processes, proxies or any other surrogates.

Remediates

Terminates Process Tree

Uses Logs to restore all File, Directory & Registry changes & perform rollback.

© Copyright 2026 – Donnacha Forde. All rights reserved.

Remediation Details

File & Directory

Files & Directories restored to original state.

Encrypted files removed.

‘Dropped files’ removed.

Windows Registry

RegKeys & Values restored to original state.

Created RegKeys & Values removed.

File Attributes

Preserve Hidden/Archive file attributes.

Security Descriptors

Preserve file security metadata.

Restore File/Directory ownership.

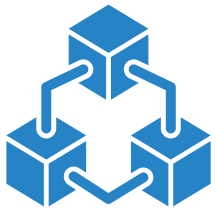

RunKeys & Startup Directories

Clean autostart registrations.

Clean known (and not-so-well known) directory & registry locations.

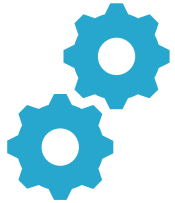

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

Detecting Lateral Movement*

Windows Service Control Manager

Registration of background Windows Services (Daemons).

Windows Task Scheduler

Remove tasks scheduled for future execution.

Windows BITS

Background Intelligent Transfer Service

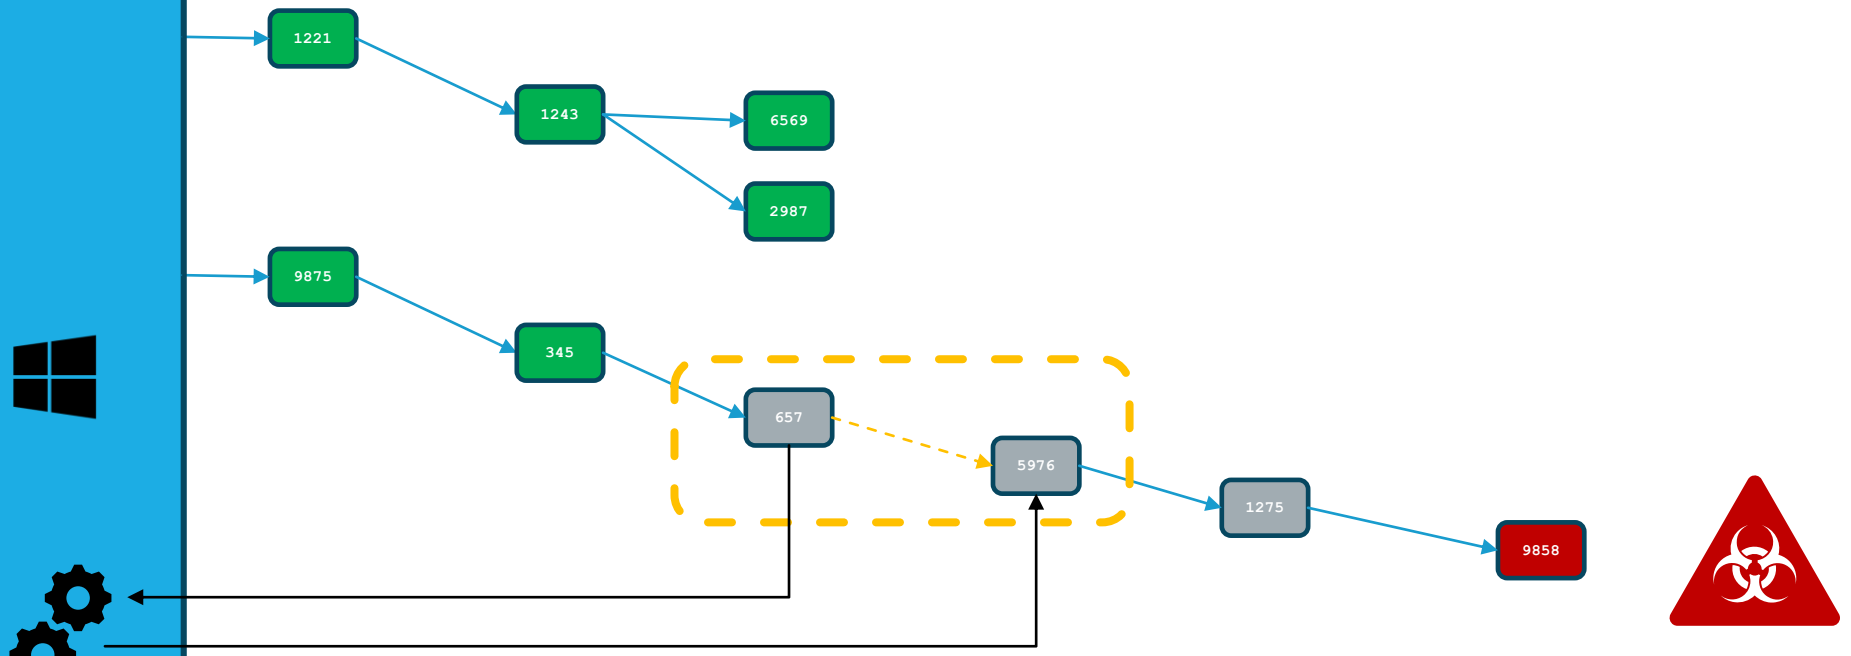

Facilitate intelligent file download

Download failure triggers registered handler.

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

*Endpoint Lateral Movement (or Micro Lateral Movement)

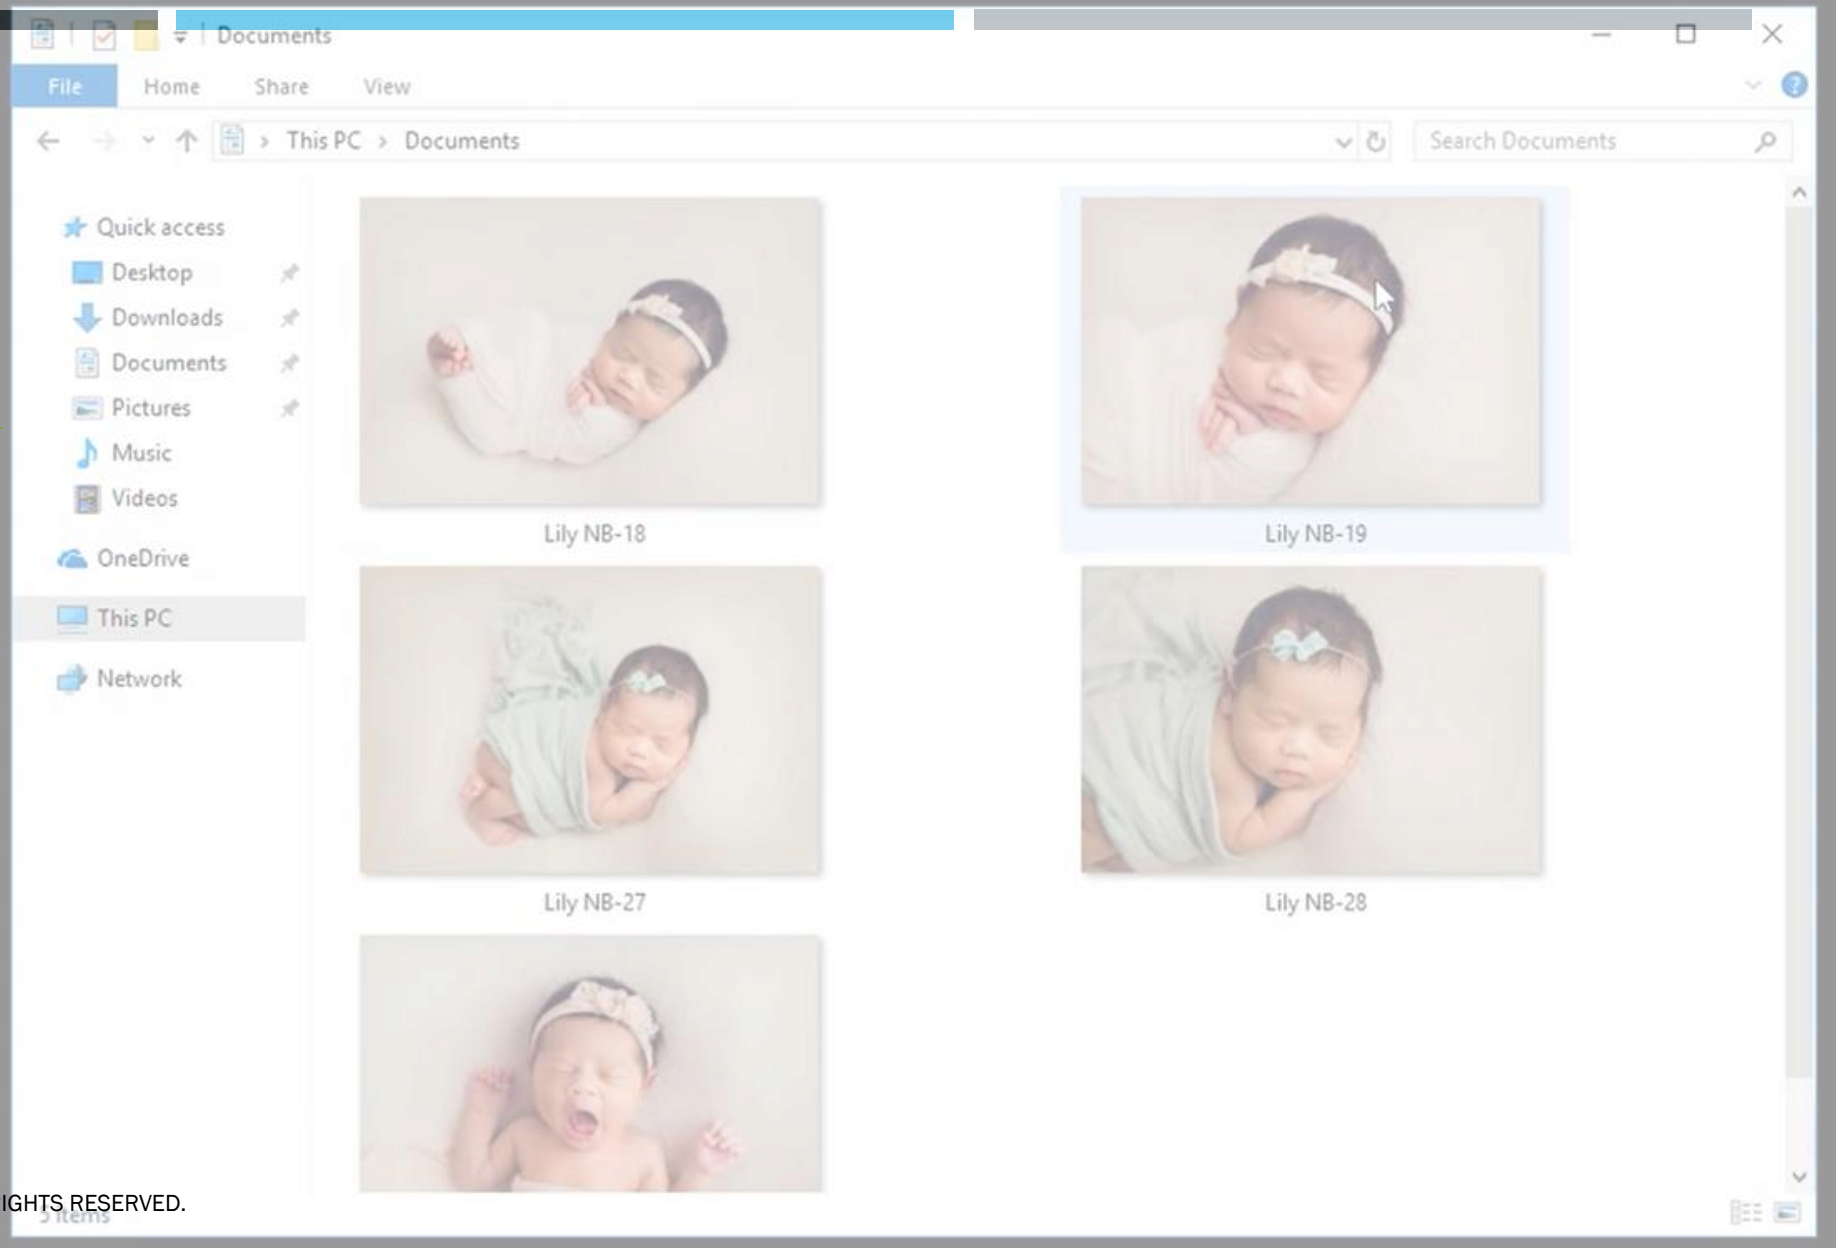

Detecting Lateral Movement

© Copyright 2026 – Donnacha Forde. All rights reserved.

DEMO

https://www.youtube.com/watch?v=OwJSZT2U4kM

© COPYRIGHT 2026 – DONNACHA FORDE. ALL RIGHTS RESERVED.

Summary

© Copyright 2026 – Donnacha Forde. All rights reserved.

Lots of Problems Left to Solve

WHAT TO TAKE AWAY

01 **Defend the endpoint in layers**

02 **The agent is the tip; the backend is the iceberg**

03 **Threats keep evolving**

04 **No one vendor has all the solutions**

PROBLEM: EXPOSURE

31%

of initial access is exploiting vulnerabilities; only 26% of known-exploited ones were fully fixed (Verizon 2026)

PROBLEM: AI

1 in 4

malicious breaches were AI-enabled (IBM 2026). OWASP's LLM Top 10 covers the new attack surface

PROBLEM: RESILIENCE

48%

of breaches involved ransomware (Verizon 2026). Detection, containment and rollback all matter

PROBLEM: STEALTH

LOTL

Attackers use legitimate admin tools instead of malware, and strike at night (ThreatDown 2025)

PROBLEM: COST

$4.99M

average cost of a breach (IBM 2026). Faster, cheaper detection and response is still open

Your move

Pick a layer below the waterline.

Sources: Verizon 2026 DBIR; IBM Cost of a Data Breach 2026; ThreatDown 2025 State of Ransomware; OWASP Top 10 for LLM Applications (from your deck)
